

# Principles of Robot Autonomy I

Section 3: Introduction to Turtlebots!

**Stanford**  
University

# Aims

- Gain a basic understanding of the Turtlebot software.
- Use basic tools for interacting with the Turtlebot.

# Final Project Groups

- Please start thinking about and forming groups of 3-4 for the final project.
- They do not have to be in your section.
- They do not have to be in the same course code.
- We'll have a signup sheet later.
  
- The reason we're asking you to think about this now is because the next homework will have a group component (more details to follow!).

# Section 3

- Focuses on getting launching the Turtlebot simulator and learning how to teleop them.
